## Touch-Screen and Pocket-PC Applications for Nursing Flow Sheets

LINTECH introduces revolutionary **touch-screen** and **Pocket-PC** applications, affording easy and friendly data entry to be used by the nursing home's clinical staff for capturing flow sheets.

The users take advantage of **touch-screen** and/or **Pocket-PC** hardware to enter their data through convenient graphic icons which serve as virtual buttons. This method of data entry is enthusiastically received by the nurses and nurse aides, who can immediately relate to the user-friendliness of this application (e.g., the resident's photo serves as an icon to his or her file – see attached image).

By using graphic icons instead of a keyboard and a mouse, the following benefits are gained:

- Savings in cost and time needed for data entry and related training.
- Streamlining of daily workflow.
- Data entry errors are minimized.
- Increased user acceptance.
- Ease-of-use allows even inexperienced computer users to take advantage of the system.
- Quick return on investment for the **touch-screen** and **Pocket-PC** hardware.
